DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:
2. The prior art teaches a field effect transistor where there is a source, channel, drain, gate insulator, and a gate, wherein the gate detects biological elements. The prior art also teaches of a field effect transistor as stated above, but where there is a back gate and the detecting region is made on the channel. The prior art also teaches where the gate of the fet has multiple probes that are electrically connected to the gate and extend there from in a vertical direction away from the channel.
3. The prior art is silent with respect to a field effect transistor where there is a source, channel, drain, gate insulator, and a gate, wherein the gate detects biological elements in combination with the gate being formed into multiple gates that are insulated from each other and formed on the same channel in a lateral direction perpendicular to the channel between the source and drain in the same fet. This combination has been found to be non-obvious thus allowed.
4. Claims 12-22 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent Application Publication Nos. 2007/0072336 and 2007/0063304
